

## An academic experience:

# The DOSE course at ETH Zurich

## Project: involving other universities

#### Since 2007:

- 1. ETH Zurich
- 2. Hanoi University of Technology (Vietnam)
- 3. ITMO, Russia
- 4. IT University of Copenhagen, Denmark
- 5. KAIST (Korea)
- 6. Odessa National Polytechnic (Ukraine)
- 7. Politecnico di Milano (Italy)
- 8. University of Debrecen (Hungary)
- 9. University of Delhi (India)
- 10. University of Nizhny Novgorod (Russia)
- 11. University of Rio Cuarto (Argentina)
- 12. University of Zurich
- 13. Universidad Politécnica de Madrid
- 14. Wuhan University (China)

## Project principles and roles

## Emulate industrial setting, but only where it makes sense

- > Benefits of a controlled setting
- > Goal #1 is to learn

## All groups created equal

> We do not want one university to specify & another implement

## Clear management structure

- > Central management role, currently at ETH
- > Technology choices imposed

Eiffel (as a language and method)
Origo software development platform
origo.ethz.ch

Web tools
Any others that may be necessary

> Universities can contribute, e.g. broadcast own lectures

## Cluster-based, not process-based

- > Team: a few students (2 or 3) from one university
- > Group: collection of teams

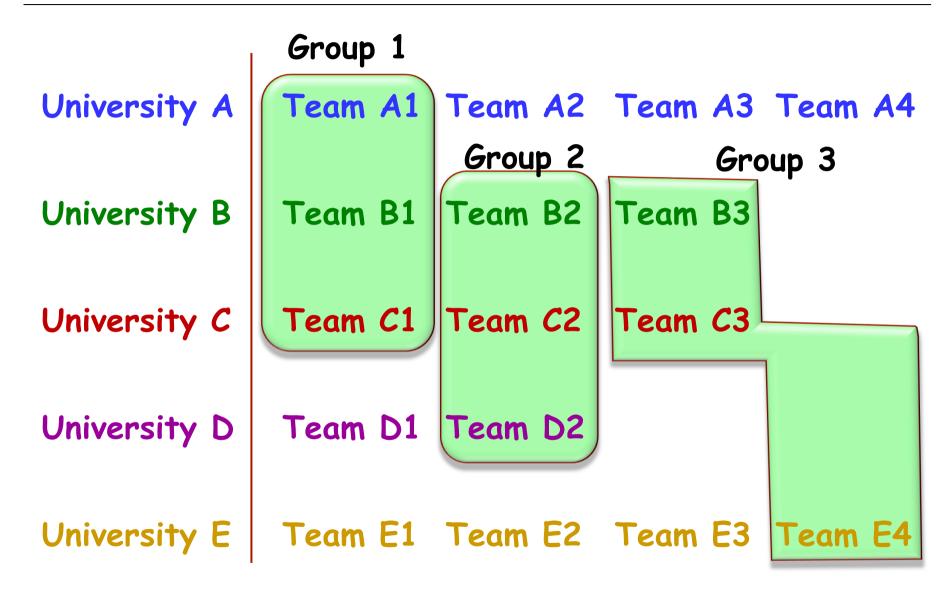

Each group does the full project

## Each team does a part of the project

This is a part of the system ("Cluster"), not a part of the lifecycle

#### **(**

## Teams and groups

#### **(**

## Project presentation (2007)

Attended by students from all universities involved

(through Skype)

#### Universities:

- 1. ETH Zurich
- 2. University of Zurich
- 3. Odessa National Polytechnic (Ukraine)
- 4. University of Nizhny Novgorod (Russia)

25 developers - 3 countries - 4 projects

## Typical group configurations:

- (A) Zurich (B) Nizhny Novgorod (C) Zurich
- (A) Zurich (B) Zurich (C) Odessa

#### Phases:

- > Phase 1: Requirements (4 weeks)
- > Phase 2: Interface specification (3 weeks)
- > Phase 3: Implementation & Testing (4 weeks)

## Project:

➤ A system to analyze and store email postings of computer science events (conferences, workshops, etc.), to feed the Computer Science Event List (CSEL, <a href="http://events.informatics-europe.org">http://events.informatics-europe.org</a>)

## DOSE 2007 project results

- Delays to set up the projects
- Lack of communication
  - Delay in replying to e-mails
  - · Technical problems with Skype conferences
- Misunderstandings in SRS
- ·Weak API design
  - Incomplete
  - Ambiguous
- Integration partially failed

#### **O**

## Software Requirements Specification

- D.1. The system shall be able to extract the elements of a call for paper from text e-mails.
- D.2. The system can send the e-mail only if at least all key elements have been extracted or introduced by the user. The key elements are: (1) conference name, (2) conference dates, (3) abstract and submission deadline, (4) conference category, and (5) URL of the conference.
- D.3. The conference category is either "Conference" or "Symposium" or "Workshop" or "Summer School"

#### **(**

## Some problems

#### Case 1 - Submission deadline:

- ➤ Team A: day.month.year
- > Team B: integers for the day and year but a string (such as "January" or "February") for the month.

# Case 2 - Abstract deadline earlier than submission deadline:

- > Team A: Not checked
- > Team B: Checked Exceptions were triggered

## More problems

## Case 3 - Conference Category:

- > Team A: "Conference" or "Symposium" or "Workshop" or "Summer School"
- > Team B: "Conference" xor "Symposium" xor "Workshop" xor "Summer School"

## Solution: class specification

```
class EVENT feature
 submit_to_csel
      -- Submit the conference information by sending an e-mail.
   require
    valid_deadlines: abstract_deadline.earlier_than (paper_deadline)
  do ... end
feature -- Implementation
 name: STRING
 abstract_deadline, paper_deadline: DATE
 category: CATEGORY
invariant
      category_status: category.is_conference xor
       category.is_symposium xor
       category.is_workshop xor
      category.is_summer_school
end
```

## Interface: class CATEGORY

```
class CATEGORY feature -- Status report
  is_conference: BOOLEAN
       -- Does this category represent conferences?
     do end
  is_symposium: BOOLEAN
      -- Does this category represent symposiums?
     do end
  is_workshop: BOOLEAN
      -- Does this category represent workshops?
     do end
  is_summer_school: BOOLEAN
       -- Does this category represent summer schools?
     do end
end
```

Techniques of abstraction & contracts

## Students started assignments too late

Assignments were finished close to the deadline, leaving no time to solve integration problems.

#### 2008 solution:

- > Each phase implemented in two cycles
- > Students submitted an assignment every second week

## Some students dropped out

2008 solution: outside of ETH, choose volunteers; strong pressure on students to commit (or leave early).

## Some project could not integrate

2008 solution: force use of contracts

#### •

## Difficulties (e-mails)

Some members of our team suffer from weak-English.

Aleksey couldn't read any emails last week because his Internet cable had been stolen by a drunk bear.

implemented in Eitter, now, we cannot integrate it, any

I'm sorry I could not make it to the implementation meeting yesterday. A water pipe in my apartment burst ... After some frantic hours of fixing and cleaning up, it is now more or less OK.

## E-mails

0

... it seems that this team is total absent and reject communication (probably because of a limit in their English)....

Team A complains of a lack of collaboration with its teammates (Team B and C). Also, we received a message concerning the unwillingness of Team B of using  $X \dots$ 

...please fill in the details of your functional requirement...

## The last DOSE Courses

1.	ETH Zurich		
2.	University of Zurich	2007	
3.	Odessa National Polytechnic (Ukraine)		
4.	University of Nizhny Novgorod (Russia)		
5.	Politecnico di Milano (Italy)	2008	
6.	University of Debrecen (Hungary)		
7.	Hanoi University of Technology (Vietnam)	2009	
8.	University of Rio Cuarto (Argentina)	2009	
9.	KAIST (Korea)		
10.	Wuhan University (China)		
11.	University of Delhi (India)	2010	

#### The last DOSE Courses

#### **DOSE 2007**

• 25 developers - 3 countries - 4 projects

#### **DOSE 2008**

42 developers - 5 countries - 21 teams - 7 projects

#### DOSE 2009:

• 50 developers - 6 countries - 16 teams - 1 project

#### DOSE 2010:

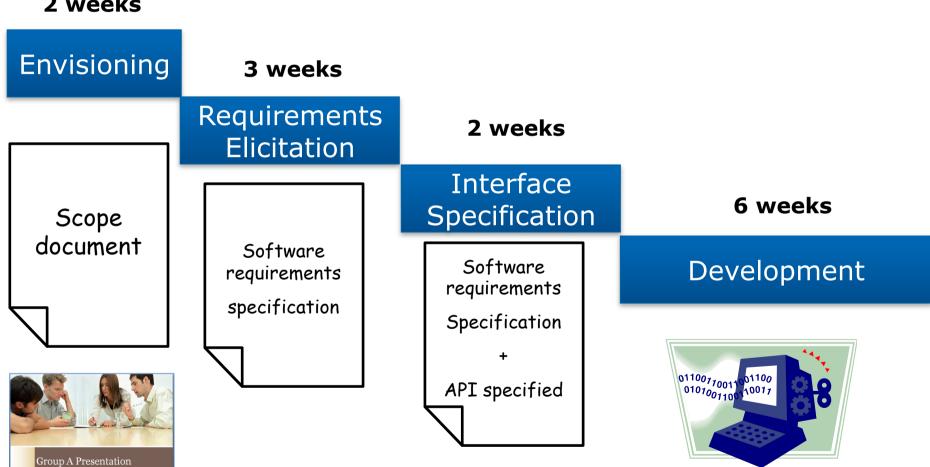

103 developers - 10 countries - 30 teams - 1 project

#### DOSE 2011:

• 101 developers - 10 countries - 31 teams - 1 project

#### 2 weeks

## Groups' presentation

#### Shenji Schäppi

Computer Science MSc Student at ETH Zurich

- Eiffel Exp.: good
- SRS Exp: good
- Work Exp: Internship at Accenture India (Bangalore)
- O-O languages: Good Knowledge of Java, basic knowledge of C#,C++,C
- Languages spoken: English, German, French

#### Minh Le Do

Computer Science BSc Student at HUT

- Eiffel Exp.: none
- SRS Exp: basic
- Work Exp: Internship at LINC HUT (Hanoi, Vietnam)
- Biggest project: 1'000 lines of code
- O-O languages: Basic Knowledge of Java, basic knowledge of C#
- Languages spoken: English,
   Vietnamese, German

#### Conrado Plano

Computer Science MSc Student at ETH Zurich

- Eiffel Exp.: good
- SRS Exp: good
- Work Exp: Assistant for lecture Introduction to Programming, Internship at Accenture India (Bangalore) and Lotus Notes Consultant at ATEGRA AG
- O-O languages: Good Knowledge of Java, basic knowledge of C#
- Languages spoken: Spanish, English, German, Italian

#### Duc Hoang Bui

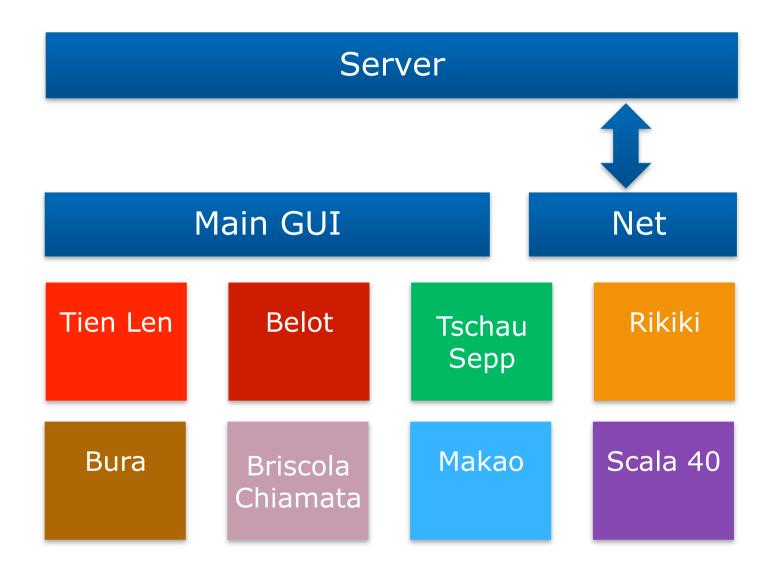

Computer Science MSc Student at HUT

- Eiffel Exp.: basic
- SRS Exp: good
- Work Exp: Internship at ATNAVN (Hanoi)
- Biggest project: 12'000 lines of code(a web application on Struts2)
- O-O languages: Good Knowledge of Java, basic knowledge of C#
- Languages spoken: English,
   Vietnamese, French

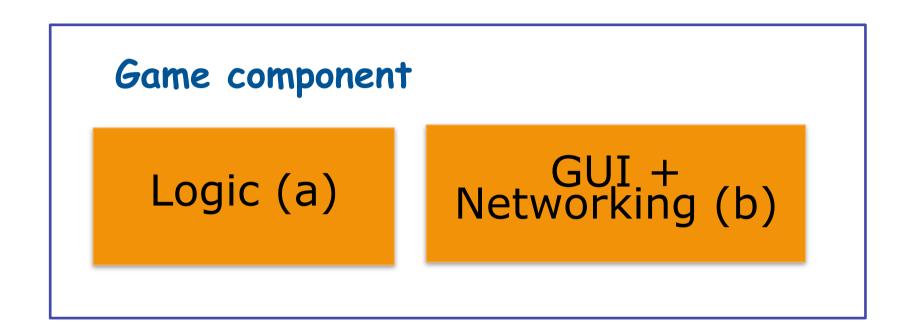

#### **(**

## Application Architecture (DOSE 2009)

## One game: two teams in two locations

Example: Logic of a Russian game is implemented in by a Russian team.

GUI is done by an Italian team.

	Teaching staff				
Project Leader Zurich	Project Leader Milano	Project Leader Debrecen	Project Leader Hanoi	Project Leader Odessa	Project Leader N. Novgorod
Group Leader	Group Leader	Group Leader	Group Leader		Group Leader
Belot	Briscola Chia.	Rikiki	Tien Len		Bura
Group Leader Tschau Sepp	Group Leader Scala 40

Tien Len (b)	Rikiki (b)	Rikiki (a)	Tien Len (a)		
Belot (a)	Briscola Chiamata (a)	Belot (b)			Briscola Chiamata (b)
Tschau Sepp (a)	Scala 40 (a)		Tschau Sepp (b)	Scala 40 (b)	
Bura (b)					Bura (a)
Makao (a)	Makao (b)				Students

## The last DOSE Courses: Results

#### **DOSE 2007**

4 projects failed

#### **DOSE 2008**

- · 4 projects fully implemented and integrated
- 3 projects failed

#### DOSE 2009:

8 projects fully implemented and integrated

#### DOSE 2010:

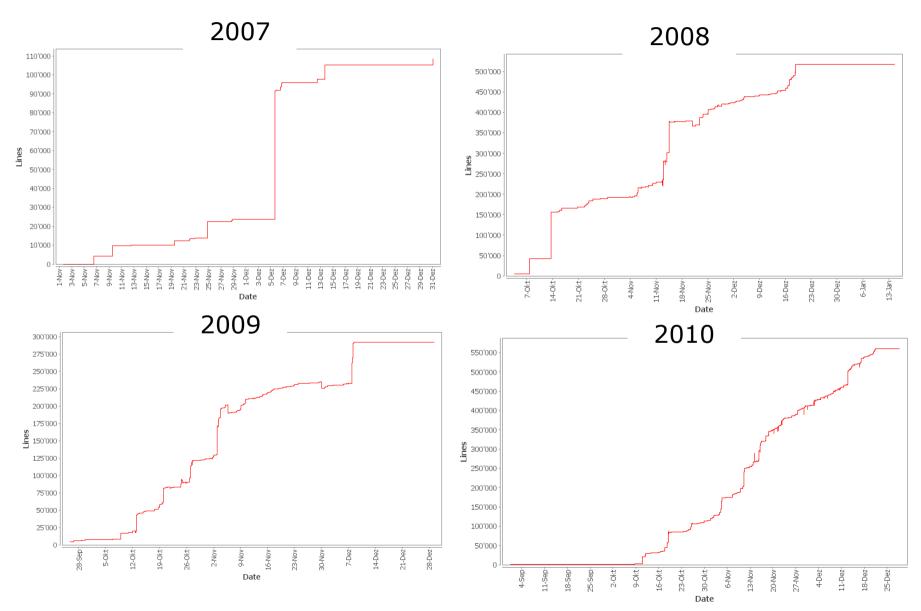

11 projects fully implemented and integrated

#### DOSE 2011:

In progress

## The last DOSE Courses: Results

## Challenges at DOSE

Project management is difficult

API Design

Communication through phone/skype and video conference is difficult

- > Heavy accents
- > Noise in communication

...Why is Mitko getting errors while it compiles for me. I think that Mitko might be using an older EiffelStudio...

..There are compilation errors in the code of the teams BriscolaChiamata, Bura, Scala 40, and TschauSepp...

Someone added a cluster but did not update the current project file which produced a broken build

...The GUI works fine in Windows, but it does not work in Linux...

## More DOSE problems

There is clear progress in the teams Scala 40 and TschauSepp. But, what is the status of the teams BriscolaChiamata and Bura?

The Vietnamese team promised a new GUI by last Monday, but they have not committed jet; what should we do?

### Requirements:

- Weak description of functionalities of each component
- Requirements for UI: only high level description, any UI for any game could satisfy the SRS
- Requirements for Logic: the rules of the games are not described
- Requirements for Net: the communication protocol is not specified
- Lack of deep review

#### API:

- A very small set of functionalities are in the API;
   main functionalities are missing
- Weak contracts
- Wrong signature for the features
- It is still unclear how implements what

## Implementation

- Integration of the components in the last week (instead of integrating them from the first day)
- One team implements most of the project: limited results
- Bad SRS -> delays in implementation

Setting up the project is very important: provide templates for documents, basic implementation project, etc

Contracts helps to document and understand the interfaces

Critical part of the project should not be outsourced: keep control of what could fail the project

Communication is the core issue

Infrastructure (network, tools...) is critical

## DOSE course lessons for the industry:

Challenges and
Practical Advice for
Distributed and Outsourced
Software Engineering

## Challenges of DOSE

Project Management

Cultural Differences

Time zones

Communication and Language skills

## Challenges: project management

Project management is difficult

In a traditional one-site setting, the manager can just go to a developer's office and ask to see the current state

It is difficult for the project manager to form a good picture of the project's progress

Configuration management plays an important role

### Practical advice for project management

Provide templates

Monitor the tasks constantly

Maintain regular communication

For example, one hour weekly meetings

Remind the team about deadlines and double check with the developers if the deadline is still realistic

### Practical advice for project management

Require the developers to show a proof of progress (for example by showing a demo, asking deep questions about the implementation, monitoring the code, etc)

#### Define commit rules

Code must compile before commit Test must run before commit Code must review before commit

#### Apply code reviews:

Review-to-commit
Commit-then-review

### Challenges: cultural differences

Working in the same culture

Common knowledge

Different cultures

Different cultural backgrounds

Different national holydays

Different interpretations

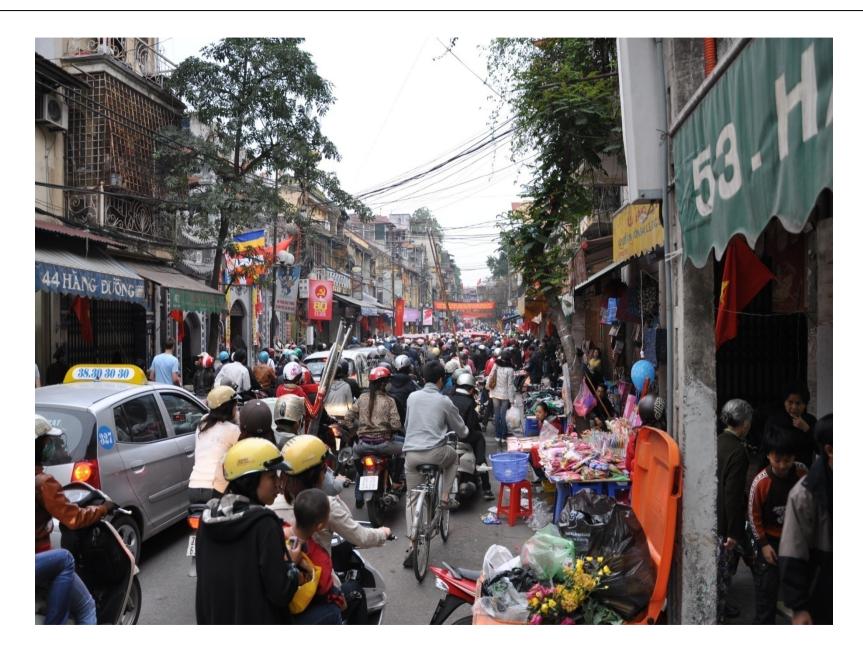

#### **(**

### Cultural differences: train in india

#### **(**

#### Cultural differences: traffic in Hanoi

#### **(**

#### Cultural differences: Cambodia

Illustrative Examples (these examples are only illustrative examples)

## **CULTURAL DIFFERENCES**

#### Indian Culture

```
For example, for Indians:
```

"yes" means "yes, I have heard you"
"done" means "I will start to do it tomorrow"

Negative feedback is giving by
not responding
Trying not to answer
Suggesting alternatives

[Examples from: Working with India - Wolfgang Messner]

### Yes, No: India

**O** 

http://www.youtube.com/watch?v=3hCV2oO2akw

## Negative feedback

0

Company C in Germany sends a feedback form to Company D in India

After 5 days: C contacts D asking about the feedback

Company D: feedback form? When?

[Examples from: Working with India - Wolfgang Messner]

#### Practical advice: cultural differences

Be aware of the cultural differences and learn about the counterpart's cultures

Indicate the country holidays in a common calendar

Take into account the country holidays when defining a deadline

0

Keep meetings on schedule

Keep in mind the Daylight Saving Time

Do not wait to send an e-mail (even if the it is late or early in the other time zones)

### Challenges: communication and language skills

E-mail is not enough - need for voice communication

Communication through phone/skype and video conference is difficult

Heavy accents

Different English mistakes to the ones one is used to

Tools are important

Use several forms of communications: e-mail, voice conferences, wikis, docs

Create mailing lists

Send the important information in writing

Write minutes of the meetings recording decisions taken, and action items (todos)

# The world has gone global, so has the software world

# Many issues remain, failure always possible

# Solutions exist, improving all the time

Many software engineering lessons apply, made even more relevant by distributed development

#### Communication is the core issue:

- Between people
- · Between modules: crucial role of APIs and contracts

# Infrastructure is critical

# Technology changes our mode of working

# The written word remains essential

# We can't do this without O-O and contracts

# Universities should teach this
