About the Final Exam and the Project Demonstration
Eiffel in Depth, 2009

The final exam of the course will be on Dec. 15th, 2009, 13:15 -- 14:45, in HG F 26.3.
The course project demonstration will be on Dec. 15th, 2009, starting from 15:00 in HG F 33.1.

Your final grade of this course consists of two parts: final exam 30% and course project 70%.

To have an impression about the final exam, you can download the exam paper of 2008 from course webpage (http://se.inf.ethz.ch/teaching/2009-H/eiffel-0291/index.html --> Downloads).

The total number of points for course project is 70, which may come from the following parts:

- **Software system**
  You will get 25 points for providing usable services ("usable" means the operation has to be successful at least once out of three tries) of the "minimal" set of functions listed in the requirement part of project description.
  However, if anyone of these functions is missing/unusable, the penalty would be a deduction of 4-6 points for each missing function or 2-4 points for each unusable one.
  By implementing more functions in the system, you may get up to 15 more points, depending on the amount of extra work in the extension.

- **Project report**
  In the project report, you need to provide at least an introduction in the beginning, the information about the website architecture, storage/database design and necessary explanation to these design, and a discussion at the end.
  With the necessary information present in your report, you may get 10-15 points depending on the overall quality of the report.

  **NOTE:**
  Please state the contribution of each group member clearly in your project report, if applicable.

- **Software artifacts**
  You’re encouraged to submit also other design documentations (than the compulsory ones in the project report), e.g. the site map, the class diagrams and the information flow charts. You could get up to 10 points for a comprehensive set of documents, while no penalty would be imposed for missing the whole part.

- **Demonstration**
  Although the demonstration of your system would only contribute 10-15 points to your final grade, failing to do it would cost you 30 points. So please contact the course assistant as soon as possible if you won’t be able to attend that session according to the above arrangement.

  **NOTE:**
  Each demo should not take more than 10 min, including the possible Q&A interaction.
  Please state the contribution of each group member clearly in your narration, if applicable.

  We always hope all your system would run correctly during the demonstration. However, given the fact that the project depends heavily on Xebra and EiffelStore and there might be problems in setting up the environment and making it work stably, if your system fails during the demo, it would be very important for you to describe your design and try to explain the reason of failure immediately. This explanation will help the assistants to evaluate you work more properly. Please get fully prepared!

A softcopy of all deliveries (source code, possible artifacts, and project report), together with a hardcopy of the project report, should be submitted no later than Dec. 15th.
Failing to submit the whole set of deliveries in time will lead to a deduction of 35 points for each day of delay, which also implies no hand-in would be accepted after Dec. 17th.
