

# Distributed and Outsourced Software Engineering (DOSE 2015)

## *Assignment 1: Setup*

---

*(Mandatory)*

*Deadline: Tuesday, September 29th 5pm (CET)*

### Communication Rules

There are several universities involved in this project. Good communication is **important**. Please, when you send any e-mail to the assistants or your colleagues start the subject with: **[dose2015]**. Furthermore, when you sign the e-mail, always **add your group number** (you will get a group number soon), and the name of the university you are from.

**Task:** watch the introductory lecture held at ETH (recorded during DOSE 2012). While there are some differences in deadlines and this year's course project, the basics remain the same:

<http://youtu.be/nhsLehOzYIU>

### Codeboard Exercises

Codeboard, a teaching tool developed at ETH Zurich, will be used for simple programming exercises in order to introduce you to the Eiffel programming language. We will provide exercises that all students will have to complete individually. These exercises will be short and simple (only take 15-30 minutes) but they are **mandatory** for all students.

**Task:** create a Codeboard account at:

<https://codeboard.io/signup>

## GitHub Account

We will use GitHub as our development and collaboration platform. Every student will need to have a GitHub account.

**Task:** create a GitHub account (if you don't have one yet) at:

<http://github.com>

## Report Your Team's Details

To organize the groups and teams we require the details from all team members. We've created an online form for this that asks for:

- University:
- Team member 1:
  - Name:
  - E-mail:
  - GitHub username
  - Codeboard username:
  - Skype id (at least one member of the team should have a Skype id):
- Team member 2:
  - “...”
- Team member X:
  - “...”

**Task:** one student per team (please avoid redundant submissions) must fill-in and submit the form at:

<http://tinyurl.com/dose2005-reg>
